# Amendments to the Claims:

This listing of claims will replace all prior versions, and listing of claims in the application:

## Listing of claims:

Claims 1-30 Canceled

31. (Currently amended): A method for transferring remote files from a remote server to a local client, the method comprising the steps of:

receiving a file request at the local client from a local file requester to download all portions of the remote file <u>from the</u> remote server to the local file;

responsive to the received file request, initiating the retrieval of all portions of the remote file <u>from the remote</u> <u>server</u> to the local file;

responsive to the initiating the retrieval from the remote server, retrieving all portions of the remote file from the remote server to the local file, wherein the retrieval performed in response to the initiating the retrieval of all portions of the remote file from the remote server skips portions already retrieved from the remote server;

making the portions retrieved <u>from the remote server</u> at the local file available to the file requester;

receiving at the local client a portion request from a local portion requester to retrieve a portion of a remote file from the remote server to a local file at the client server, the remote file having one or more first portions preceding a second portion, the portion request comprising information specifying the second portion of the remote file from the remote server;

determining the status of portions received from the remote file from the remote server;

responsive to the portion request, when the status of the portions received <u>from the remote server</u> indicates that the second portion has not been received <u>from the remote server</u> at the local file and when one of the one or more first portions has not yet been received from the remote file <u>from the remote</u> server, initiating from the local client the retrieval of the second portion of the remote file <u>from the remote server</u> to the local file; and

when the second portion has been received <u>from the remote</u>

<u>server</u> at a second portion of the local file, making the second portion of the local file available to the portion requester.

## 32 - 33 Canceled

34. (Currently amended): The method according to claim 31 comprising the further steps of:

when the second portion has been received at the local file from the remote server, continuing the retrieval of the remote file from the remote server, the retrieval continuing at the location of the remote file following the end of the second portion.

35. (Currently amended): The method according to claim 31 comprising the further steps of:

when portions of the remote file have been received <u>from the</u>

<u>remote server</u> at the local file, retrieving not received portions
of the remote file <u>from the remote server</u> at the local file; and
when all portions of the remote file <u>from the remote server</u>

<u>have has been received at the local file, making all portions of the local file available to the file requester.</u>

36. (Previously presented): The method according to claim 31 comprising the further step of creating the local file at a local client computer system.

- 37. (Previously presented): The method according to claim 36 wherein the local file created is portion addressable such that a downloaded portion can be directly accessed within the local file by a local client application.
- 38. (Previously presented): The method according to claim 31 wherein the requester is an application program of a local client computer system.
- 39. (Previously presented): The method according to claim 31 wherein the remote file comprises any one of binary data, text data, video data or audio data.

40. (Curently amended): A method for transferring local files from a local server to a remote client, the method comprising the steps of:

receiving a file request from a remote file requester to send all portions of the <u>a</u> local file from the local server to the <u>a</u> remote file of a remote client:

initiating the sending of all portions of the local file <u>from</u> the <u>local server</u> to the remote file, wherein sending portions in response to the initiating the download of all portions of the local file <u>from the local server</u>, skips portions already sent to the remote file <u>from the local server</u>;

receiving a portion request from a remote portion requester to send a portion of a local file <u>from the local server</u> to a remote file, the local file <u>from the local server</u> having one or more first portions preceding a second portion, the portion request comprising information specifying the second portion of the local file <u>from the local server</u>; and

responsive to the portion request, when one of the one or more first portions has not yet been sent <u>from the local server</u>, sending the second portion of the local file <u>from the local</u> <u>server</u> to the remote file.

- 41. (Curently amended): The method according to claim 40 comprising the further steps of:
- a local server future file application at the local server retrieving a data file from a file system;

the remote server future file application saving the data file retrieved in the local file, the local file comprising portion addressable access to the portions of the local file for sending portions from the local file to the remote file.

### 42. (Canceled)

43. (Currently amended): The method according to claim 40 comprising the further steps of:

when the second portion has been sent <u>from the local server</u> to the remote file, continuing the sending of the local file <u>from the local server</u>, the sending <u>from the local server</u> continuing at the portion of the local file following the end of the second portion.

44. (Currently amended): The method according to claim 40 comprising the further steps of:

when portions of the local file have been sent <u>from the local</u> <u>server</u> to the remote file, sending <u>from the local server</u> not yet downloaded portions of the local file to the remote file.

# 45. (Canceled)

46. ((Currently amended): The method according to claim 40 comprising the further steps of:

receiving a remote portion request at the remote client from a portion requester application to retrieve the second portion of the local file to the remote file;

determining the status of the portions received <u>from the local</u> <u>server</u> at the local file;

responsive to the remote portion request, when the status of the portions received <u>from the local server</u> indicates that the second portion has not been received <u>from the local server</u> at the remote file and when one of the one or more first portions has not yet been received <u>from the local server</u>, sending <u>from the local server</u>; and

when the second portion has been received <u>from the local</u> <u>server</u> at the second portion of the remote file, making the second portion of the remote file available to the portion requester application.

47. (Curently amended): A system for downloading remote files from a remote server to a local client, the system comprising the steps of:

- a network;
- a remote computer system;

a local computer system in communication with the remote computer system via the network wherein the computer systems includes instructions to execute a method comprising the steps of:

receiving at the local client a portion request from a local portion requester to retrieve all portions of a remote file from the remote server to a local file at the client server, the remote file having one or more first portions preceding a second portion, the portion request comprising information specifying the second portion of the remote file;

determining the status of portions received from the remote file from the remote server at the local file of the local client;

responsive to the portion request, when the status of the portions received <u>from the remote server</u> indicates that the second portion has not been received <u>from the remote server</u> and stored at the local file and when one of the one or more first portions has not yet been received from the remote file <u>from the remote server</u>, initiating from the local client the retrieval of all not yet retrieved portions <u>from the remote server</u> beginning with the second portion of the remote file <u>from the remote server</u> to the local file;

when the status of the portions received <u>from the remote</u>

<u>server</u> indicates that the second portion has been received <u>from</u>

<u>the remote server</u> and stored at the local file and when one of

the one or more first portions has not yet been received from the

remote file <u>from the remote server</u>, initiating from the local

- 50. (Curently amended): A system for downloading files from a local server to a remote client, the system comprising the steps of:
  - a network;
  - a remote computer system;
- a local computer system in communication with the remote computer system via the network wherein the computer systems includes instructions to execute a method comprising the steps of:

receiving at the local server a portion request from a remote portion requester at the remote client to send all portions of a local file of the local server to a remote file, the local file of the local server having one or more first portions preceding a second portion, the portion request comprising information specifying the second portion of the local file of the local server; and

responsive to the portion request, when one of the one or more first portions has not yet been sent <u>from the local server</u>, sending <u>from the local server</u> all not yet sent portions of the local file beginning with the second portion of the local file to the remote file.

51. (Curently amended): The system according to claim 50 comprising the further steps of:

a local server future file application at the local server retrieving a data file from a file system;

the remote server future file application saving the data file retrieved in the local file at the local server, the local file comprising portion addressable access to the portions of the local file at the local server for sending portions from the local file at the local server to the remote file.

52. (Currently amended): The system according to claim 50 comprising the further steps of:

when the second portion has been sent <u>from the local server</u> to the remote file, continuing the sending of the local file <u>from the local server</u>, the sending <u>from the local server</u> continuing at the portion of the local file following the end of the second portion.

53. (Currently amended): The system according to claim 50. comprising the further steps of:

receiving a remote portion request at the remote client from a portion requester application to retrieve the second portion of the local file <u>from the local server</u> to the remote file;

determining the status of the portions received <u>from the local</u> server at the local file;

responsive to the remote portion request, when the status of the portions received <u>from the local server</u> indicates that the second portion has not been received <u>from the local server</u> at the remote file and when one of the one or more first portions has not yet been received <u>from the local server</u>, sending the portion request to the local server; and

when the second portion has been received <u>from the local</u> <u>server</u> at the second portion of the remote file, making the second portion of the remote file available to the portion requester application.

### DE919990097US1

54. (Curently amended): A computer program product for downloading remote files from a remote server to a local client, the computer program product comprising:

a storage medium readable by a processing circuit and storing instructions for execution by a processing circuit for performing a method comprising the steps of:

receiving at the local client a portion request from a local portion requester to retrieve all portions of a remote file from the remote server to a local file at the <a href="local\_client">local\_client</a> server, the remote file <a href="from the remote server">from the remote server</a> having one or more first portions preceding a second portion, the portion request comprising information specifying the second portion of the remote file;

determining the status of portions received from the remote file <u>from the remote server</u> at the local file of the local client;

responsive to the portion request, when the status of the portions received <u>from the remote server</u> indicates that the second portion has not been received <u>from the remote server</u> and stored at the local file and when one of the one or more first portions has not yet been received from the remote file <u>from the remote server</u>, initiating from the local client the retrieval of all not yet retrieved portions <u>from the remote server</u> beginning with the second portion of the remote file <u>from the remote server</u> to the local file;

when the status of the portions received <u>from the remote</u>

<u>server</u> indicates that the second portion has been received <u>from the remote server</u> and stored at the local file and when one of the one or more first portions has not yet been received from the remote file <u>from the remote server</u>, initiating from the local client the retrieval of all not yet retrieved portions <u>from the remote server</u> to the local file; and

when a portion of the all portions of the remote file have been received <u>from the remote server</u> and stored at a portion of the local file, making the portion of the local file available to the portion requester.

### 55 - 56 (Canceled)

57. (Curently amended): A computer program product for downloading local files from a local server to a remote client, the computer program product comprising:

a storage medium readable by a processing circuit and storing instructions for execution by a processing circuit for performing a method comprising the steps of:

receiving at the local server a portion request from a remote portion requester at the remote client to send all portions of a local file from the local server to a remote file, the local file having one or more first portions preceding a second portion, the portion request comprising information specifying the second portion of the local file from the local server; and

responsive to the portion request, when one of the one or more first portions has not yet been sent <u>from the local server</u>, sending all not yet sent portions of the local file <u>from the local server</u> beginning with the second portion of the local file <u>from the local server</u> to the remote file.

58. (Curently amended): The computer program product according to claim 57 comprising the further steps of:

a local server future file application at the local server retrieving a data file from a file system;

the remote server future file application saving the data file retrieved in the local file of the local server, the local file comprising portion addressable access to the portions of the local file for sending portions from the local file of the local server to the remote file.

# 59. Canceled

60. (Currently amended): The computer program product according to claim 58 comprising the further steps of:

receiving a remote portion request at the remote client from a portion requester application to retrieve the second portion of the local file <u>from the local server</u> to the remote file;

determining the status of the portions received <u>from the local</u> <u>server</u> at the local file;

responsive to the remote portion request, when the status of the portions received <u>from the local server</u> indicates that the second portion has not been received <u>from the local server</u> at the remote file and when one of the one or more first portions has not yet been received <u>from the local server</u>, sending the portion request to the local server; and

when the second portion has been received <u>from the local</u> <u>server</u> at the second portion of the remote file, making the second portion of the remote file available to the portion requester application.
